FM RESOURCE MANAGEMENT

Aside from labor costs, the most significant expense on a budget is likely fuel-related. A company's fleet must be maintained to its fullest capabilities in addition to fuel and securing a low-cost solution will enable you to focus on the larger tasks.

Have you deployed a secure way to track your yard's fueling expenses or your bulk tank?

Regardless of which system you or your company is currently running, FM Resource Management is the ideal platform to assure you capture the fuel-related data you need for optimal savings and/or efficiencies.

- *Fuel Master Unit*
- *Tecalemit's Fuel Management System*
- *WIX Credit Card Processing System*
- *OPW Petrovend Unit*

How are you tracking your fuel purchases and related costs?

Do you believe you are losing money either with insufficient inventory control or even theft?

FM Resource Management can deploy assets to reduce – or eliminate – your exposure and loss due to theft.

The FM Fuel & Resource team has several solutions to meet those needs – and potentially save your organization money via our FM Resource Management platform. This system can measure fuel usage, including its use, and provide additional insight and facts to assure your fleet is operating optimally.

With our fuel management system or FM Resource Management, we can work with you to deploy a strategic approach to get your transportation division operating at its fullest potential.

Your account manager is ready to answer any questions and develop a customized strategic plan so you can see savings!

# FM RESOURCE MANAGEMENT

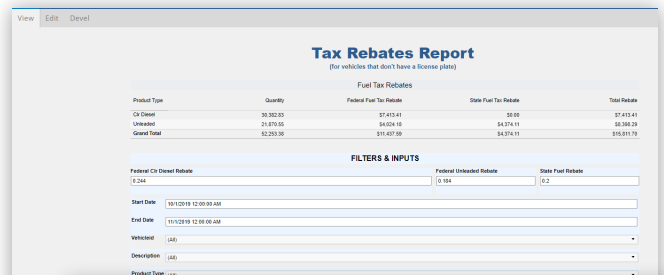

Fuel and Data Management

- Proprietary web-based reporting system
- Evaluate existing equipment and driver data
- Create custom data setup
- Set equipment/driver control/limit parameters (fuel tank capacity, product restrictions, single transaction limits, transactions per month, etc.)
- Identify profit centers and lines of business for cost tracking
- Combine information from multiple sources to eliminate gaps in data

Web-Based Reporting

- Reporting of transactions for compliance with system parameters and exception requirements
- Produce Fuel Usage Reports by vehicle, department, profit centers, lines of business, and product
- Exception reporting:
- Multiple Transactions
- Product Restriction/Multiple Product Analysis Transaction Quantity and Capacity
- Custom formatted data for exporting to client information systems (CSV, Excel,PDF)

Using a 100-gallon tank mounted on the back of his personal pickup, a state Department of Transportation employee siphoned off thousands of gallons of fuel, costing the department more than $36,000.
